Cf Polling – Vote System 1.0.1

Here is a Voting system extension which it has a customizable design.

Abilities:

- Drag and drop with no specific configuration
- Completely customizable design
- No database is needed
- Ability to set an expiry day to stop the polling at the end of specific period
- One vote per IP address

There 2 small tricks for this extension:

1- Do NOT forget to change the extension of your page to PHP
2- Please Make sure that the folder "polls" in folder cfPolling is writable (chmod 777) AFTER uploading the Folders and files to FTP.
   This extension is for free of charge for now and you can download it including Help document from below links: (Extension is tested with WB8.1 only but i do not see any issue not to work with any other versions. Please let me know if fails for any other version)
   http://www.virtualdesigners.co.uk/projects/wb-extensions/cfpolling/cf-polling.zip

   Link to see the demo:
   http://www.virtualdesigners.co.uk/projects/wb-extensions/cfpolling/demo/

   The Original work and idea is taken from codefuture.

   I would be glad to hear any feedback to improve this extension.
